EXPERIENCE

Murex

Beirut, Lebanon

Software Engineer

June 2023 – Present

- Worked on a multi-tenant, event-driven, SaaS platform, built with Java (Spring Boot) and Angular.
- Built and maintained long-running, fault-tolerant workflows using Temporal, handling critical business processes that span days or weeks.
- Led the design and implementation of a real-time dashboarding module, aggregating data from multiple databases using Trino and delivering interactive charts that give users visibility into system activity.
- Contributed to platform security and tenant isolation, implementing authorization and role separation using OPA and enforcing tenant-level data isolation with PostgreSQL Row-Level Security (RLS).
- Wrote and maintained unit, integration, and end-to-end tests, helping keep production regressions at a minimal level and making feature development safer.
- Collaborated with product owners, architects, and senior engineers to design new features, review code contributions, and deliver solutions aligned with business and technical requirements.
- Served as Scrum Master, facilitating Agile ceremonies (planning, standups, retrospectives, demos) to improve collaboration and delivery efficiency.
- Onboarded and mentored new team members, helping them understand the system architecture, workflows, and development practices.

Part-Time Software Engineer

Oct 2022 – May 2023

- Implemented distributed tracing using OpenTelemetry and Jaeger across multiple microservices, covering REST APIs, Temporal workflows, and RabbitMQ message flows, enabling faster root-cause analysis and improved observability.
- Designed and integrated a feature flagging system using Unleash, allowing gradual rollouts, safer releases, and controlled feature exposure across tenants.
- Built an email notification system to alert users about pending actions and long-running processes, improving user responsiveness and reducing operational delays.

Software Engineer Intern

June 2022 – Aug 2022

- Led the initial prototyping and evaluation of Temporal, establishing it as the workflow orchestration engine now used across the platform for long-running business processes.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, SQL, HTML/CSS

Frameworks: Spring Boot, Angular, React, Node.js

Systems & Tools: Docker, Git, Maven, Gradle, Jenkins, RabbitMQ, PostgreSQL, MongoDB, Trino

Testing & Observability: JUnit, Mockito, Jest, Cucumber, Pact, TestContainers, OpenTelemetry, Jaeger, Unleash

Practices: Microservices, Distributed Systems, CI/CD, TDD, DDD, Agile

PROJECTS

Car Go ([github](#)) | Java, Spring Boot, React, PostgreSQL, Docker, JWT Authentication

April 2023

- Developed a full-stack car rental platform, enabling users to register, list vehicles, and manage rental bookings.
- Implemented authentication and authorization with Spring Security and JWT, integrated PostgreSQL for persistence, and containerized services using Docker for streamlined deployment.

Lawen Taxi App ([github](#)) | React, Node.js, Express, MySQL

Jan 2023

- Built a taxi booking application where users can request rides, drivers can accept bookings, and admins can manage platform operations through a responsive React interface.
- Created RESTful APIs with Node.js and Express for ride management and integrated them with a MySQL database to support reliable data storage and retrieval.

EDUCATION

Lebanese American University

Byblos, Lebanon

Bachelor of Engineering in Computer Engineering, GPA: 3.8

Sep 2019 – May 2023
